

Dylan Pham

DATA SCIENTIST · SOFTWARE ENGINEER

📞 (+358) 504 763 601 | ✉️ hoangdungpham0703@gmail.com | 🌐 dylanpn

Summary

Senior Machine Learning Engineer and AI systems builder with experience designing data pipelines, production ML platforms, and cloud infrastructure across engineering and organizational environments. Built AI-native workflows that turn fragmented inputs into usable knowledge, improve internal execution speed, and support cross-functional decision-making. Comfortable operating across engineering, operations, and business partnership work to deliver scalable, reliable, and automation-driven systems.

Work Experience

Oy L M Ericsson Ab

Jorvas, Finland

MACHINE LEARNING ENGINEER | MACHINE LEARNING OPS

Jan. 2023 - Now

- **ML Application Development:** Developed ML/AI application for Software-Defined-Network product to detect bad weather conditions using network transmission signals, enabling proactive maintenance and system reliability improvements
- **Data Pipeline Optimization:** Implemented concurrent processing in data pipeline, achieving 100x faster data insertion for time-series network data, significantly improving system scalability for large-scale network operations
- **Cloud Infrastructure and MLOps:** Built and managed cloud-based ML systems using Docker, Kubernetes, and Kaniko for containerization; deployed services with Helm charts; maintained CI/CD pipelines with Jenkins; implemented data versioning with DVC for reproducible ML experiments
- **Production System Optimization:** Deployed and maintained ML pipelines using Kubeflow and MLflow, ensuring reliable model lifecycle management and monitoring for mission-critical network applications
- **Security and 3pp Management:** Fully manage Third-Party-Product for all Python code bases, ensure released versions comply with GDPR compliance and minimize exposure to security issue.
- **Cross-functional Collaboration:** Worked with data scientists, network architects, and product teams to deliver AI-driven solutions for real-time network optimization
- **AI Harness Design:** Design systematic workflow for teammate and agentic AI, improving x2 speed in producing same quality code without security and performance efficiency trade-off

Frontier Leader Institute Vietnam

HCM City, Vietnam

CIO | BUSINESS PARTNER

Nov. 2024 - Now

- **Human-AI Data Workflow:** Restructured the organization's data pipeline by integrating video recordings, Google Forms, participant feedback, and other operational inputs into a human-AI collaboration workflow, improving knowledge capture and internal information flow.
- **Cloud and AI Infrastructure:** Designed and managed cloud infrastructure for website hosting, data storage, AI processing, and chatbot deployments, establishing an AI-native operating environment and enabling up to 5x employee productivity.
- **International Partnership Development:** Identified and developed cooperation opportunities between European organizations, universities, and FLI Vietnam, expanding the quality and range of Frontier's product offerings.

Nokia Bell Labs

Espoo, Finland

RESEARCH ASSISTANCE

Feb. 2022 - Aug. 2022

- Conducted a research project on **quantifying RNN model performance** for **robot destination prediction** in obsolete network systems.
- Designed and implemented a **real-time matching and scheduling algorithm** to optimize latency and reliability for device-to-control station communication.
- Developed comprehensive simulations using **MATLAB** for multi-device scenarios, evaluating and optimizing model performance.
- Used Python (pandas) extensively for data cleaning, transformation, and enrichment before loading data into databases

Nexttech Group Of Technopreneurs, Ltd.

Hanoi, Vietnam

MACHINE LEARNING ENGINEER

Jun. 2019 - Mar. 2020

- Implementing machine learning to **enhance OCR system** from given texts with the accuracy of 90%.
- Sold for **\$10,000** in under 1 month of work leading another teammate
- Delivering solution for **objects and faces detection** in video with the accuracy of 95%.
- **Statistically evaluating** customer financial balance (both individuals and organizations).

RikkeiSoft Co. Ltd

Hanoi, Vietnam

BACK-END WEB DEVELOPER

Sep. 2018 - May. 2019

- **Leading 3-person team** to maintain management systems for 2 chain stores with 30+ branches for Japanese customers.
- Building and maintaining the system based on Kintone environment (customized by JavaScript) and Python for computing; categorizing products, price, etc.; outputting report for managers to obtain an overview process of chain stores system.

Education

Aalto University, University of Twente

Helsinki, Finland - Enschede,
Netherlands

DOUBLE DEGREE MASTER STUDENT - MAJOR IN DATA SCIENCE, MINOR IN ENTREPRENEURSHIP

Sep. 2020 - Sep. 2022

- ACHIEVEMENTS: Monthly EIT scholarship for Excellent Student
- GPA: 4.2

FPT University

Hanoi, Vietnam

BACHELOR IN SOFTWARE ENGINEERING

Sep. 2014 - Aug. 2018

- ACHIEVEMENTS: Full scholarship from FPT University
- GPA: 4.1

Skills

Programming	Python, Golang, MATLAB, SQL
AI & Data Systems	RNN, Feature Engineering & Analytics, Human-AI Workflow Design, AI Agent & Context Management
Framework	Tensorflow, Pytorch, Scikit-learn, Keras, Robot Test Framework, OpenAPI/Swagger
Cloud, DevOps & MLOps	Docker, Kubernetes, Kaniko, Helm, Jenkins, Git, DVC, Unix/Linux, KubeFlow, MLFlow, CI/CD
Language	English, Vietnamese
